PUT YOUR NAME ON THE NEXT GENERATION OF MEDICINE

BUILDING THE FUTURE OF SPECIALIZED MEDICAL KNOWLEDGE THROUGH AI AGENTS

The Authors of Clinical AI Project is a global initiative by **MetaQare** (www.metaqare.ai) **to capture, structure, and scale the knowledge of the world's leading clinicians through intelligent AI agents**. Each agent acts as a digital health companion, trained on the expertise of a recognized Key Opinion Leader (KOL) or institution, and deployed within MetaQare's secure ecosystem of telemedicine, AI, and blockchain. Our vision is healthcare without borders: proactive, equitable, and accessible to all.

The Problem

Billions lack access to specialized healthcare.

Even where care exists, expertise is limited to geography, language, and availability.

Doctors face shortages, administrative burdens, and delayed payments.

Medical knowledge is fragmented and unevenly distributed.

The Solution

Authors of Clinical AI bridges patients, providers, and institutions with a new paradigm:

AI Agent Ecosystem

Digital health companions powered by the knowledge of world-class experts.

Telemedicine Integration

Agents embedded into MetaQare's web and mobile apps.

Blockchain Backbone

Trust, compliance (GDPR, HIPAA), and instant, transparent transactions.

Inclusive Payments

Crypto and traditional methods, widening access for underserved populations.

Key Differentiators

Knowledge Provenance

Each agent is signed by its clinical author (Dr./Institution).

Credibility

Built in partnership with top KOLs, hospitals, and scientific societies.

Scalability

Standardized framework for onboarding and monetizing hundreds of specialties.

Meritocratic Model

Revenue share based on actual usage and patient benefit.

> For centuries, medicine has moved forward through observation, experience, and human judgment. One doctor. One patient. One moment at a time.
>
> But today, for the first time in history, we can multiply that knowledge — beyond borders, beyond time, beyond the limits of any individual mind.
>
> MetaQare was born from a simple yet powerful idea: that the clinical wisdom of the world's best specialists should be accessible to every patient, anywhere on the planet.
>
> This is not about replacing doctors. It's about amplifying their intelligence. It's about transforming human insight into a living language —one that machines can learn from, expand, and share — with ethics, rigor, and full traceability.
>
> Every physician who joins Authors of Clinical AI does more than teach an algorithm. They leave a signature on the history of medicine.
>
> For the first time, human knowledge becomes a living legacy — with a name, a voice, and a purpose. MetaQare is not building software. It's building the collective intelligence of humanity in health. And we want you to be part of it.

Luis Miguel Vindel
CEO MetaQare

Revenue Model

B2C

Subscriptions and pay-per-use,
55% authors
Royalty Pool

B2B

Institutional licenses (hospitals, insurers)
50% authors
5% channel.

VOLUMEN TIERS

Incentives for high-usage agents, rewarding top performers.

MGs
(Minimum Guarantees)

MGs (Minimum Guarantees): Offered to strategic specialties and KOLs.
